PROFILE

Full stack and AI engineer, cofounder of YADverse. I take products from the first sketch to a running server: web platforms, field apps for government teams, and governed AI tooling. My favourite projects sit where careful engineering meets real constraints: an app that has to work for forest officers in the field, a CRM an admissions team uses every day, or an AI agent that must not be allowed to do the wrong thing.

EXPERIENCE

Cofounder and engineer, YADverse — Jan 2025 to now
Kathmandu, Nepal

- Cofounded a three person software studio that builds web apps, AI products and hosting for clients in Nepal and Australia.
- Own frontend and backend architecture for client projects from scoping through to production.
- Run reverse proxy hosting on studio managed servers, with services that restart themselves.

Full stack developer, BRCRN Project, Government of Nepal — May 2026 to Jul 2026
Ministry of Agriculture, Forest and Environment

- Delivered two production systems during a 50 day technical internship on a GCF and FAO funded project.
- Built the Plantation Monitoring System: an Android field app and web portal on one database, loaded with baseline data for all 26 river systems.
- Built the Churia Knowledge Centre, including a tool that finds, fetches and classifies ministry documents automatically.

WordPress developer, YourFleetElite — Contract
Sydney, Australia (remote)

- Built and maintained the production site, improving speed and mobile layout.

SELECTED PROJECTS

Okta Access Airlock · RailCall marketplace module — 2026

A governed way for AI agents to administer Okta. Every change is previewed, approved by a person and then checked again before it runs, so an agent can help with access reviews without being trusted blindly.

Python 3.11 · OAuth 2.0 private_key_jwt · DPoP · MCP · GitHub Actions · Demo: youtu.be/uGARAVYtTCA

Plantation Monitoring System · BRCRN Project, Government of Nepal — 2026

One system for the whole plantation lifecycle on a GCF and FAO funded climate project: a field app for officers on the ground and an admin portal for the ministry, sharing a single database.

Flutter (Android) · React · tRPC · PostgreSQL · Leaflet · Reverse proxy · Linux

Synexis CRM · YADverse product — 2026

A student admissions CRM, built from scratch, that lets a consultancy manage applicants, track every application and keep university preferences in one place.

Node.js · Express · MySQL · JWT · Role based access · REST

YourFleetElite · Remote client, Sydney — 2025

The production WordPress site for a Sydney fleet management company: vans, trucks and utes kept on the road. Built and maintained remotely across time zones.

WordPress · PHP · Custom theme · Performance tuning

SakritCraft · Personal engine project — In progress

A survival and crafting game on a game engine written from scratch in C# and Vulkan. Terrain is a signed distance field, so tunnels slope and cliffs overhang, streamed out to the horizon.

C# · .NET 9 · Vulkan 1.3 · Surface nets · Cascaded shadows

MORE PROJECTS

Churia Knowledge Centre

Knowledge platform for the Ministry of Forests and Environment. Finds Chure research on government sites and classifies it with a local model, with a three reviewer publishing flow and a 3D map of the region.

Accent Coach

Speak into the mic and get an accent estimate across 23 classes plus pronunciation and fluency scores, all computed locally on a CPU.

Python to C compiler

A deterministic compiler for a subset of Python with a desktop IDE. A local model is consulted only for unknown calls, and its answer is used only if it compiles.

Malhotra Enterprise

Catalogue and enquiry platform for an architectural hardware business in Kathmandu, with manager and customer conversations mirrored over email.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C#, C, SQL

Backend: Node.js, Express, FastAPI, REST APIs, JWT, Role based access

AI: RAG pipelines, LangChain, LlamaIndex, Ollama, MCP, Whisper

Mobile and CMS: Android, Flutter, WordPress

Frontend: React, Next.js, Tailwind CSS, three.js, Framer Motion

Data: PostgreSQL, MySQL, MongoDB, Supabase, Prisma

Ops: Docker, GitHub Actions, Linux servers, Reverse proxy hosting

Design: Figma, Blender, Interaction design

EDUCATION

B.Tech, Computer Science and Engineering

Vellore Institute of Technology, Vellore, India · 2024 to now

Cambridge A Level: Physics, Mathematics, Computer Science

Little Angels College, Kathmandu, Nepal · 2021 to 2023
