PROFILE

Full-stack developer and co-founder of YADverse — a software studio shipping web apps, AI products, and hosting infrastructure from Kathmandu. I work directly with clients across time zones, owning projects end-to-end: scoping, architecture, build, and live deployment. Alongside the studio, I take select freelance contracts in custom web development, CRM systems, REST API design, and WordPress. Currently in my penultimate year of B.Tech CSE at VIT Vellore; available for remote contracts.

STUDIO

Co-Founder & Full-Stack Developer · Jan 2025 – Present

YADverse — *Software Studio* | Kathmandu, Nepal · yadverse.netlify.app

YADverse is a product-engineering studio serving clients across Nepal, Australia, and beyond. We design and build web apps, AI-integrated products, and cloud infrastructure — 12+ products shipped across 3 countries at 99.9% uptime.

- Own the frontend and backend architecture for studio client projects from initial scoping through to production deployment.
- Operate reverse-proxy hosting on studio-managed infrastructure; deploy services that auto-restart with zero downtime.
- Collaborate across a three-founder team (Dikshit Yadav — cloud infrastructure; Aayush Shah) on bid, design, and delivery.
- Stack: Next.js, React, Node.js, FastAPI, PostgreSQL, Supabase, Docker, GitHub Actions, WordPress, Tailwind.

CLIENT WORK

Full-Stack Developer — Government Deployment · May 2026 – July 2026

BRCRN Project, Ministry of Agriculture, Forest and Environment | Government of Nepal

50-day technical internship under Dr. Krishna Bahadur Bhujel and Dr. Bimal Pokhrel. Delivered two production systems for a seven-year GCF/FAO-funded project covering 26 river systems across Nepal.

Plantation Monitoring System

- Designed and built a unified Android field app + web admin portal sharing a single database across the full plantation lifecycle: site prep, implementation, protection, weeding, and casualty replacement.
- Loaded baseline data for all 26 river systems with province/district/area/population, species catalogue, and 48 LRP records across three PPMUs (Koshi, Madhesh, Bagmati).
- Deployed onto the Project's on-site Government server using a reverse-proxy approach — connecting to the existing database and running as a managed, auto-starting service without disturbing any live systems.
- Distributed the field application to field LRPs.

Churia Knowledge Centre Web Platform

- Built the web-based Churia Knowledge Centre for knowledge contribution, publication, documentation, and dissemination.
- Built an AI-driven RAG tool: the administrator configures access keys for various Government ministry data repositories; the tool autonomously locates, fetches, and classifies documents by type (journal, technical report, pamphlet) to keep the Knowledge Centre continuously populated with Chure-specific knowledge.

Full-Stack Developer · Independent Build · 2026

Synexis CRM | YADverse Studio Work

- Built a complete CRM platform from scratch: contact management, deal pipelines, activity logs, and JWT-based authentication.

- Designed REST APIs in Node.js/Express with a relational MySQL schema and role-based access control.
- Scoped, architected, built, and shipped the product end-to-end without guided scaffolding — now part of the YADverse portfolio.

WordPress Developer · Remote Contract

YourFleetElite | Australia · Remote

- Built and maintained the production WordPress site for an Australian fleet management company.
- Customised themes and integrated plugins; improved page load speed and mobile responsiveness to match client SLA.
- Delivered across time zones — zero downtime on all live deployments throughout the engagement.

TECHNICAL SKILLS

Languages: JavaScript, Python, HTML5, CSS3, C

Frontend: React.js, Next.js, Tailwind CSS, Flexbox, Grid, DOM Manipulation

Backend: Node.js, Express, FastAPI, REST APIs, JWT auth, RBAC

Databases: MySQL, PostgreSQL, Supabase, Prisma

DevOps: Docker, GitHub Actions, CI/CD, Reverse-Proxy Hosting, Linux Server Admin

CMS: WordPress (theme customisation, plugin integration, production hosting)

AI / RAG: LangChain, LlamaIndex, RAG Pipelines, Chroma, Pinecone

Mobile: Android (field app deployment)

Tools: Git, Postman, Figma, Vercel

EDUCATION

B.Tech — Computer Science and Engineering (3rd Year) · 2024 – Present

Vellore Institute of Technology (VIT) | Vellore, Tamil Nadu, India

Cambridge A Level — Physics, Mathematics, Computer Science · 2021 – 2023

Little Angels College | Kathmandu, Nepal

ADDITIONAL SKILLS

- Custom web apps and dashboards — React + Node/FastAPI + PostgreSQL
- CRM and internal tools — role-based access, pipelines, activity tracking
- WordPress sites — theme customisation, plugin integration, performance tuning
- REST API design and integration
- AI / RAG integrations — document ingestion pipelines, knowledge bases
- Server deployment and hosting — reverse-proxy, auto-start services, Linux admin
